Please note:

Vo1 are according to the optical change from -10dBm ~0dBm. For example, In -10dBm the output level is 80dBuV, but in the 0dBm maybe output level is 82dBuV.

Vo2 are according to the temperature change .for example: when the temperature stay 40°C,the output level will lower 0.5dB than 25°C. When the temperature stay 0°C,the output level will higher 0.5dB than 25°C.

The minimum of CNR in different optical power
 $C/N \geq 46$ @ -8dBm in the frequency =175.25MHz
 $C/N \geq 47$ @ -7dBm in the frequency =175.25MHz
 $C/N \geq 48$ @ -6dBm in the frequency =175.25MHz
 $C/N \geq 49$ @ -5dBm in the frequency =175.25MHz
 $C/N \geq 50$ @ -4dBm in the frequency =175.25MHz
 $C/N \geq 51$ @ -3dBm in the frequency =175.25MHz
 $C/N \geq 52$ @ -2dBm in the frequency =175.25MHz
 $C/N \geq 53$ @ -1dBm in the frequency =175.25MHz
 $C/N \geq 54$ @ 0dBm in the frequency =175.25MHz

The module normally operates at $V_B=5\pm 0.25$ V

Notes:

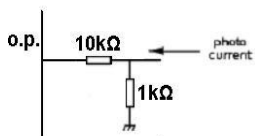

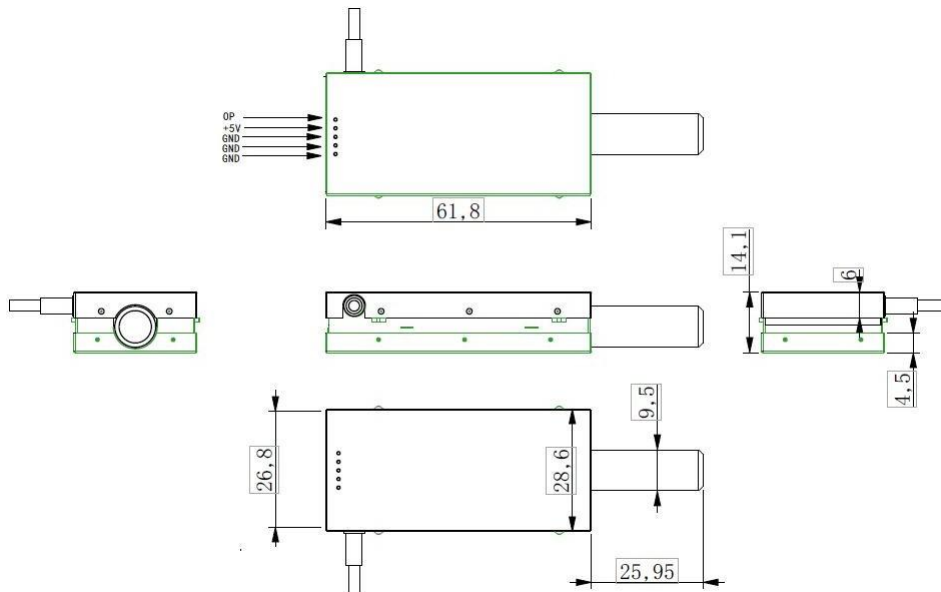

The calculation formula of: $\text{dBm} = 10 \cdot \lg(0.001 \cdot \text{mV}^2 / R)$

When measured the optical power corresponding to the monitor volt. may cause some tolerance that the range is $\pm 0.08\text{V}$

Before you measure, please clean the connector and fix it very well.
